

🧙 Wizard's Word Scramble 🧙

A magic-themed word unscrambling game built with HTML, CSS & JavaScript

[MIT LICENSE](#)[HTML / CSS / JS](#)[BEGINNER FRIENDLY](#)

Overview

Wizard's Word Scramble is a browser-based word game where players unscramble magical "runes" to cast spells. Each round shuffles the letters of a hidden word; the player types the correct word to earn mana (points) and build a spell streak. The project was built as a learning exercise covering two core programming concepts: string manipulation and randomization.

Features

- Magic/fantasy theme with a starry animated background and illuminated spellbook card
- Score, attempt counter, and streak tracking (mana, scrolls read, spell streak)
- Hint system for each word
- Fisher-Yates shuffle algorithm for fair, unbiased letter scrambling
- Fully responsive single-page layout, no build tools or frameworks required
- Easy to extend: add your own words, themes, or difficulty levels

Demo

Open `index.html` in any modern browser, or serve the folder with VS Code's Live Server extension for the best experience (auto-reload on save).

Project structure

```
wizard-word-scramble/  
├── index.html      Page structure and layout  
├── style.css       Theme, animations, and visual design  
├── script.js       Game logic (shuffle, score, hints)  
├── README.md  
└── DOCUMENTATION.md
```

Getting started

1. Clone the repository

```
git clone https://github.com/your-username/wizard-word-scramble.git
cd wizard-word-scramble
```

2. Open it in a browser

No installation or build step is required — this is a static HTML/CSS/JS project. Double-click `index.html`, or for live-reloading during development, open the folder in VS Code and run it with the Live Server extension.

How to play

- A scrambled magic word ("rune") appears inside the spellbook
- Type your answer into the input field and press Enter or click Cast
- Click Reveal Clue if you're stuck — this shows a hint for the current word
- Correct answers add 10 mana and increase your spell streak
- Click Abandon Spell to skip a word and reveal the answer

Customizing the word list

Open `script.js` and edit the `wordList` array. Each entry needs a word and a hint:

```
const wordList = [
  { word: "DRAGON", hint: "A fire-breathing beast" },
  { word: "POTION", hint: "A bubbling magical brew" },
];
```

Tech stack

Layer	Technology
Structure	HTML5
Styling	CSS3 (custom properties, animations, Google Fonts)
Logic	Vanilla JavaScript (ES6)
Dependencies	None — no frameworks, no build tools

Contributing

Contributions are welcome. Fork the repository, create a feature branch, commit your changes, and open a pull request. For larger changes, please open an issue first to discuss what you'd like to change.
